KB Collections Rainbow Vision Sand Picture
When to add water to your sandpicture.

About once a year, you will need to refill the evaporated water. When the sand takes up more than 60% of the sand picture, it is time to add water. Follow these steps:

- 1) Use purified drinking water or boil (and cool) tap water (don't use distilled).
- 2) Move the sand away from the area near the air hole.
- 3) Remove one injector tube of air from the sand picture using the steps advised above. Release this air out side of your sand picture by pushing the plunger down.
- 4) Add water into the injector, insert the injector into the air hole and push down on the injector. You will see the water going into your sand picture. Before removing the injector pull out the same amount of air out of the picture, **which is very important!**
- 5) Repeat this procedure until you can see the sand level lowering to half of the picture.

WARNING: Follow these instructions very closely.

Adding too much water or taking out too much air could create a pressure problem inside the sand picture and the glass could break. Our guarantee does not cover any breakage due to this reason. For more information, please visit our website www.sandpicture.com
With normal use, you will enjoy your Rainbow Vision Sand Picture for many years!

Please note the following:

- When you first get your sand picture, you might need to turn them over a few times to get the sand flowing normally. If some sand is sticking in a corner, just tap the glass or shake the Rainbow Vision Sand Picture gently. We recommend that the sand pictures be turned over at least every month.
- Use only the needle provided by us (27Gx2/4 = 0,4x20 mm). They are available through our web shop.

- WARNING: Contents include an injector with needle. Keep out of the reach of children. Regulating the air/water balance in the sand picture with this injector is FOR ADULTS ONLY (AGES 18 AND UP).
- Choking hazard! Keep small parts away from children.
- Do not ingest the contents of the picture.
- Do not touch broken glass.
